A modular concept with four easy pieces

The Modicon™ Momentum™ I/O system is comprised of 4 fundamental components – that easily snap together in various combinations – to form a versatile, distributed I/O system.

The four components are:

- 1 I/O base
- 2 Communication adapter
- 3 Processor adapter
- 4 Option adapter

Modicon Momentum communication adapters 2

The design of the Modicon Momentum separates the communications from the I/O base 1, thus creating a truly open I/O system that can be easily adapted to any fieldbus network. When a Modicon Momentum I/O is coupled with a communication adapter 2, the two form a remote I/O drop that connects directly to virtually any standard fieldbus I/O network. Together, Modicon Momentum I/O supports different types of control systems, including: personal computers, distributed control systems, programmable controllers and Modicon Momentum processors.

(1) The processor adapters 3 are only compatible with Concept™ or ProWORX™ software.

Modicon™ Momentum™ I/O bases

A specialized Modicon Momentum I/O base supports the rest of the control system. The communication adapter **2**, processor adapter and option adapter all snap onto the I/O base **1**. A selection of I/O base modules are available, including analog I/O, discrete I/O, multi-function analog and bi-directional discrete bases. In addition, Modicon Momentum I/O bases offer simple plug-in terminal strips, as well as standard 35 mm DIN rail or panel mounting, for ease of maintenance and installation.

Modicon Momentum processors adapters **3** and option adapters **4** (1)

When local distributed intelligence is required at the point of control, Modicon Momentum has the answer. The Modicon Momentum M1 processor adapter **3** is a full fledged PLC containing a CPU, RAM and Flash memory. It is based on the popular Modicon family of PLCs (i.e., directly compatible with Quantum™, Compact™ and 984™ PLCs), and snaps onto the Modicon Momentum I/O base **1**, just like the communication adapter **2**.

The option adapter **4** provides the processor adapter with additional networking capabilities, a time-of-day clock, and a battery back-up. The option adapter also snaps onto the I/O base. In the figure below, the processor adapter is stacked on top.

Optional conformal coating

If your control system needs to operate in a corrosive environment, selected Modicon Momentum modules can be ordered with a conformal coating applied to components of the product. Conformal coating will extend product life and enhance its environmental and performance capabilities. See pages 100 and 101.

Enhanced grounding system

Due to new INTERBUS standards for electrical noise immunity, a number of Modicon Momentum products have been updated to include an enhanced grounding system. This system is required to meet the revised electrical noise immunity standard (ability to pass a 2.2 kV electrical fast transient burst test).

See page 102 for a list of Modicon Momentum products that currently have been updated to include the new grounding system.

(1) The processor adapters are only compatible with the Concept or ProWORX software.

Introduction

Modicon™ Momentum™ automation platform products are modular in design. Communication adapters and Processor adapters are designed to work as functional modules when they are snapped onto a Modicon Momentum I/O base. This I/O base requires that some type of Modicon Momentum adapter be attached before it can be functional.

I/O bases fit into compact standard housings that can be mounted on a DIN rail or on panels in a cabinet. They read information from field sensing devices and control discrete and analog field actuating devices. Terminal blocks and bus bars are available for use with the bases so that these bases can be used to support 2-, 3-, and 4-wire field devices.

I/O field devices and the power supply to the module are connected via three 18-pin terminal blocks and an optional 1-, 2-, or 3-row busbar. The terminal connectors are electrically connected to the module, while the optional busbars are not.

Busbars provide a common connection for the field devices and serve as protective distribution connectors. Depending on the I/O base and the type and number of field devices connected to it, a 1-, 2-, or 3-row busbar may be used.

Terminal blocks and busbars are ordered separately, and are not shipped with the Modicon Momentum I/O bases. They are available in either screw-in or spring-clip versions.

Description

170 AD● discrete I/O base units feature the following on the front panel:

- 1 Internal interface connector for the communication module or processor module
- 2 Locking and ground contact for the communication module or processor module
- 3 LED status indicators (the number of indicators will depend on the number of channels)
- 4 Up to three connectors for the removable terminal blocks (Modbus dependent).
- 5 Grounding screw
- 6 Slot for the power strip
- 7 Two screw holes for panel mounting
- 8 Protective cover

Connectors to be ordered separately:

- removable screw or spring terminals **170 XTS 00● 00**
- 1 to 3-row screw or spring bus bar **170 XTS 00● 01**

Introduction

Modicon™ Momentum™ analog input bases enable acquisition of various analog values encountered in industrial applications, including:

- Standard high level ($\pm 5\text{ V}$, $\pm 10\text{ V}$, $1\text{--}5\text{ V}$, $4\text{--}20\text{ mA}$, $\pm 20\text{ mA}$)
- Low level ($\pm 25\text{ mV}$, $\pm 100\text{ mV}$)
- Thermocouples (B, E, J, ...)
- Temperature probes (Ni ..., Pt ...)

Analog output bases are used to control analog field devices such as: speed drives and proportional control valves. The current or the voltage is proportional to the digital value defined by the user program. The outputs can be configured so that when the program stops, the outputs either reset to zero or hold the last value received. This feature is useful during debugging because, if the outputs are set to "Hold", the operation of the analog field devices is not disturbed every time the program stops.

Designed to cover a wide range of applications, Modicon Momentum I/O bases offer the following functions in addition to A/D or D/A conversion:

- Choice of input/output ranges (voltage, current, thermocouple, temperature probes)
- Selection of number of channels used
- Cold junction compensation for thermocouple modules
- Broken wire detection (**170 AAI 030 00**, **170 AAI 140 00** and **170 AAI 520 40** models)

Description

170 A●● analog I/O base units feature the following on the front panel:

- 1 Internal interface connector for the communication module or processor module
- 2 Locking and ground contact for the communication module or processor module
- 3 LED status indicators (the number of indicators will depend on the number of channels)
- 4 Two connectors for the removable terminal blocks
- 5 Grounding screw
- 6 Slot for the power strip
- 7 Two screw holes for panel mounting
- 8 Protective cover

Connectors to be ordered separately:

- removable screw or spring terminal blocks **170 XTS 00● 00**
- 1 to 3-row screw or spring bus bar **170 XTS 00● 01**

Specifications for analog input bases						
Type of base units			170 AAI 030 00

I/O with Modbus Master Base

120 Vac

RS 485 2- or 4-wire Modbus port

6 True High Inputs

3 True High Outputs

1 group of 6 inputs (120 Vac @47 to 63 Hz):

- voltage range, 0 to 132 Vac
- response time, < 12.3 ms @ 60 Hz On to Off,
< 12.5 ms @ 60 Hz Off to On

3 solid state switching outputs (120 Vac @47 to 63 Hz):

- on current, 0.5 A continuous per point, 1.5 A continuous per module
- response time: < 12.3 ms @ 60 Hz On to Off, < 12.5 ms @ 60 Hz Off to On

170 ADM 540 80

Introduction

Modicon™ Momentum™ specialty module I/O bases provide support for unique applications that broaden the range of the Modicon Momentum offering. The specialty modules are: a 2-channel, High-speed counter module base - 170 AEC 920 00, and a 120 Vac, 6-point input/3-point output module base with a Modbus communication port - 170 ADM 540 80.

High-speed counter

The 170 AEC 920 00 high-speed counter module base features 2 independent counters, along with 6 discrete inputs and 4 discrete outputs. This base can connect directly to either 5 Vdc differential or 24 Vdc single-ended encoders. The base supports two operating modes:

- Incremental (up counter, down counter, and quadrature)
- Absolute (SSI up/down counter)

The high-speed counter module can be connected directly to many standard communication networks – for communicating with programmable controllers, industrial computers, and other controllers – by installing one of the snap-on Modicon Momentum communication adapters onto the base.

Input/Output module with Modbus™ communication port

The **170 ADM 540 80** input/output module base has 6 discrete inputs and 3 discrete outputs for direct connection to 2- and 3-wire sensors and actuators, plus a Modbus communication port for connection to serial devices.

This module can also be used as the I/O base for a programmable controller, in either a stand alone or distributed I/O configuration, by installing one of the snap-on Modicon Momentum M1 processor adapters.

Description

A specialty module I/O base consists of the following components:

- 1 Internal interface connector for the communication module
- 2 Locking and ground contact for the adapter
- 3 LED status display
- 4 Two connectors for the removable terminal blocks
- 5 Grounding screw
- 6 Grounding busbar mounting slot
- 7 Mounting holes for a panel mount
- 8 Protective cover for fuses (**170 ADM 540 80**) or connector for the removable terminal block

Specifications

Modicon™ Momentum™ automation platform

Ethernet TCP/IP communication adapters

Introduction

The Model 170 ENT 110 02 and 170 ENT 110 01 Ethernet communication adapters for the Modicon™ Momentum™ I/O product line provide a direct connection to Ethernet-based networks for the entire family of Modicon Momentum I/O modules. This connectivity enables communications with a full range of Ethernet TCP/IP compatible control products that includes: programmable controllers, industrial computers, motion controllers, operator control stations, host computers, and other controls. This communication network provides a flexible, cost-effective solution for communicating factory floor information to various layers of an integrated manufacturing facility.

The 100BASE-TX Ethernet communication adapter, the **170 ENT 110 01** (and the 10BASE-T adapter, the **170 ENT 110 02**) are single adapters designed to plug on to any of the Modicon Momentum Input/Output module bases. Both are designed to conform to the requirements of the Ethernet communication network.

The Ethernet IP addressing scheme allows an unlimited number of Modicon Momentum I/O modules or wiring diagrams on the network. Using standard Ethernet hubs, routers, and bridges, the performance and distance capability of the Ethernet network can be tailored to meet the requirements of almost any control application.

The Ethernet communication adapter uses the standard Modbus™ message structure and control commands over the TCP/IP protocol. This simplifies implementation by control engineering, while providing information that can be communicated over standard network media to enterprise applications.

Since Modbus on TCP/IP over Ethernet is supported by Schneider Electric's Modicon™ Quantum™ and Premium™ controller families, Modicon Momentum I/O can be added to existing control systems where additional I/O capacity of a distributed I/O sub-network is needed.

The Ethernet communication adapter requires connection to a BOOTP server for configuring the module's IP parameters, including its own unique IP address, default gateway, and sub-net mask. These parameters are stored in the communication adapter's flash memory. Schneider Electric automation business offers BOOTP Lite Ethernet software as a free download from the Schneider Electric web site at www.schneider-electric.us.

Description

The front panel of the 170 ENT 110 0● Ethernet communication adapter features:

- 1 Ethernet RJ45 connector for 100BASE-TX interface for **170 ENT 110 01**) or 10BASE-T interface for **170 ENT 110 02**)
- 2 Area for Label (label shipped with I/O base)
- 3 LED Status Indicators for the **170 ENT 110 02** display include:
 - Run (green), module health
 - LAN Active (green), Ethernet network status

LED Status Indicators for the **170 ENT 110 01** display include:

- Run (green), module health
- 10T (green), 10 Mbit/s network activity
- 100T (amber), 100 Mbit/s network activity
- ST (green), Ethernet network status

Modicon™ Momentum™ automation platform

Modbus Plus™ communication adapters

Introduction

Modbus Plus™ communication adapters for the Modicon™ Momentum™ I/O product line can be plugged into any Modicon Momentum I/O base to create a functional I/O unit on the Modbus Plus bus...and to provide a direct connection to the Modbus Plus Network for the full family of Modicon Momentum I/O modules. This connectivity enables communications with Modbus Plus compatible control products – including: programmable controllers, industrial computers, operator control stations, drive systems, and other controls – and provides a flexible, cost-effective solution for distributing I/O modules throughout a large area. To expand the capabilities of the Modbus Plus Network for distributed I/O applications, the communication adapters have been designed to permit up to 64 Modicon Momentum I/O modules to be connected to the network without the need for signal repeaters.

Each Modicon Momentum I/O module is an individual node on the Modbus Plus network with its address user-selected on the dual rotary switch on the front of the communication adapter. The Modicon Momentum I/O modules can be configured for the network, and assigned program reference numbers, by using either the Peer Cop function, the MSTR function block instruction in the programmable controller, or the Modbus Plus configuration in an industrial computer.

There are four types of communication adapters available:

170 PNT 110 20, Single Port, IEC Data Format

170 PNT 160 20, Redundant Port, IEC Data Format

170 NEF 110 21, Single Port, 984 Data Format

170 NEF 160 21, Redundant Port, 984 Data Format

IEC Data Format

This version of the Modicon Momentum Modbus Plus communication adapter communicates I/O data to the programmable controller in the IEC data format, which has bit numbering 0 through 15, right to left, within the data word (i.e., input or output number 1 is bit number 0).

984 Data Format

This version of the Modicon Momentum Modbus Plus communication adapter communicates I/O data to the programmable controller in the traditional 984 data format, which has bit numbering 1 through 16, left to right, within the register (i.e., input or output number 1 is bit number 1).

Since Modbus Plus is supported by the Modicon™ Quantum™ and 984™ controller families, Modicon Momentum I/O can be added to existing control systems where additional I/O capacity or a distributed I/O sub-network is needed.

Description

Each 170 PNT/NEF communication module is comprised of:

- 1 Three indicator lights (LEDs):
 - MB + ACT indicator light (green) : module powered up or communicating
 - ERR A indicator light (red) : detected communication error network A
 - ERR B indicator light (red) : detected communication error network B (for redundant model)
- 2 A 9-way male SUB-D connector for connecting to the Modbus Plus™ network
- 3 A 9-way male SUB-D connector for a redundant Modbus Plus network
- 4 A slot for an identification label (supplied with I/O sub-bases)
- 5 Two switches for coding the slave address on the bus

Modicon™ Momentum™ automation platform

FIPIO™ communication adapters

Introduction

The FIPIO™ communication adapter can be plugged into a Modicon™ Momentum™ I/O base to create a functional I/O unit on the FIPIO bus, and to provide a direct connection to the FIPIO Network for the full family of Modicon Momentum I/O modules. This connectivity enables the Modicon Momentum I/O to be used along with other FIPIO compatible control devices, including: industrial computers, operator control stations, drive systems, and other controls – to provide a flexible, time-critical, cost-effective solution for distributing I/O modules throughout a large area.

There are two types of communication adapters available:

170 FNT 110 01 (1) for a FIPIO bus connected to a Modicon™ Premium™ PLC
170 FNT 110 00 for a FIPIO bus connected to TSX 7 series CPUs or APRIL 5030 and 5130 CPUs

Each Modicon Momentum I/O module is an individual node or device on the FIPIO network with its address set by the user on the dual rotary switch on the front of the communication adapter. FIPIO is a network that can have up to 128 slave devices. The FIPIO network's distance and communication capabilities range from 1000 meters (3330 ft.) to 15000 meters (45000 ft) with repeaters over twisted pair cable at a data rate of 1 Mbit/s.

(1) The FIPIO communication adapter **170 FNT 110 01** does not support the **170 ADM 540 80** I/O base.

Description

The 170 FNT 110 0p communication module features the following:

- 1 Three indicator lights (LEDs):
 - Ready indicator light (green): module powered up or in service
 - COM indicator light (yellow): data being sent or received
 - ERR indicator light (red): inoperative device
- 2 9-way male SUB-D connector for connecting to FIPIO bus
- 3 Slot for identification label (supplied with I/O sub-bases)
- 4 Two switches for coding slave address on the bus

Specifications		
Type of module		170 FNT 110 01
		170 FNT 110 00
Communication bus		FIPIO™
Bus manager PLC		Premium
		TSX Series 7, model 40 or April 5000
Structure	Type	Open industrial, conforming to the WorldFip standard
	Topology	Devices connected using extension cable or tap-off cable
	Length meters	1,000 to 5,000 depending on the medium used
	Access method	Producer/consumer principle, managed by a bus arbiter
Transmission	Bit rate	1 Mbit/s
	Media	Shielded twisted pair cable 150 Ω. Fiber optic 62.5/125 or 50/125 with electrical/optical repeaters
Number of Modicon™ Momentum™ devices	Per segment	31 connection points (without repeater)
	Maximum	97 connection points
		61 connection points
Behavior in the event of a detected communication error		Discrete I/O: forcing to state 0
		Analog I/O: configurable (maintain value, fallback to 0 or full scale value)

Modicon™ Momentum™ automation platform

INTERBUS™ communication adapters

Introduction

The INTERBUS™ communication adapter for the Modicon™ Momentum™ I/O product line provides a direct connection to the INTERBUS Network for the full family of Modicon Momentum I/O modules. This connectivity enables Modicon Momentum I/O to be used in open architecture control systems that utilize either a programmable controller or industrial computer as the network master. In these applications, INTERBUS serves as the communication network that connects Modicon Momentum I/O modules, along with other INTERBUS compatible control devices, for the communication of input and output information with a single master controller.

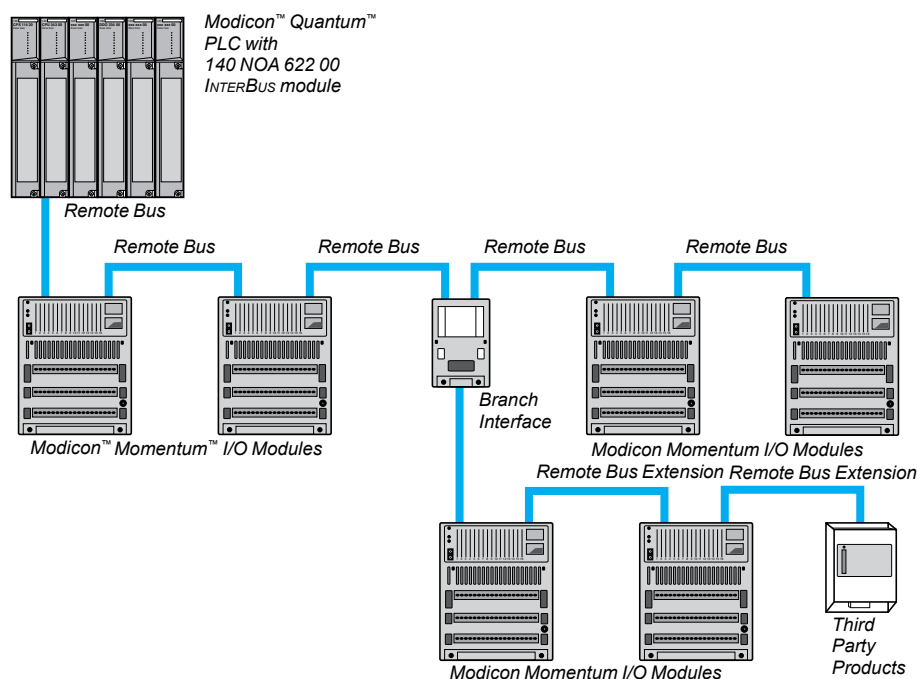

There are two types of INTERBUS adapters available:

170 INT 110 00, twisted pair media, SUP1 2

170 INT 110 03, twisted pair media, SUP1 3, supports G4 diagnostic

The INTERBUS communication adapter is designed to plug on to any of the Modicon Momentum Input/Output module bases, thus allowing the I/O module to be accessed over the INTERBUS Communication Network. Each Modicon Momentum I/O module is an individual node or device on the INTERBUS network with its address set either by its physical location on the network, or by menu-driven software that is available with some INTERBUS master devices. INTERBUS is a cost-effective method of distributing I/O modules throughout large plant areas. The figure below illustrates a typical control system using Modicon Momentum I/O modules on the INTERBUS network, with a Quantum PLC programmable controller as the network master.

Network Topology

Description

The **170 INT 110 0●** INTERBUS communication adapters feature the following on the front panel:

- 1 Two 9-Pin SUB-D connectors for connection to the INTERBUS bus
- 2 Area for Label (label shipped with I/O base)
- 3 LED Status Indicators for **170 INT 110 0●** include:
 - UL (green), logic power check (**170 INT 110 03** only)
 - BA (green), bus enabled
 - RC (green), remote bus check
 - RD (yellow), remote bus disabled

Specifications			
Model No.		170 INT 110 00	170 INT 110 03
Communication network		INTERBUS™, I/O BUS	INTERBUS
Communication rate	Kbit/s	500	
Number of nodes (devices)		Up to 254 devices	
Media		Twisted Pair	
Distance	m (ft)	Up to 12 800 (41 984 ft), 400 (1312 ft) between two nodes	
Connectors		2-9 Pin "D" connectors

Modicon™ Momentum™ automation platform

Profibus DP™ communication adapters

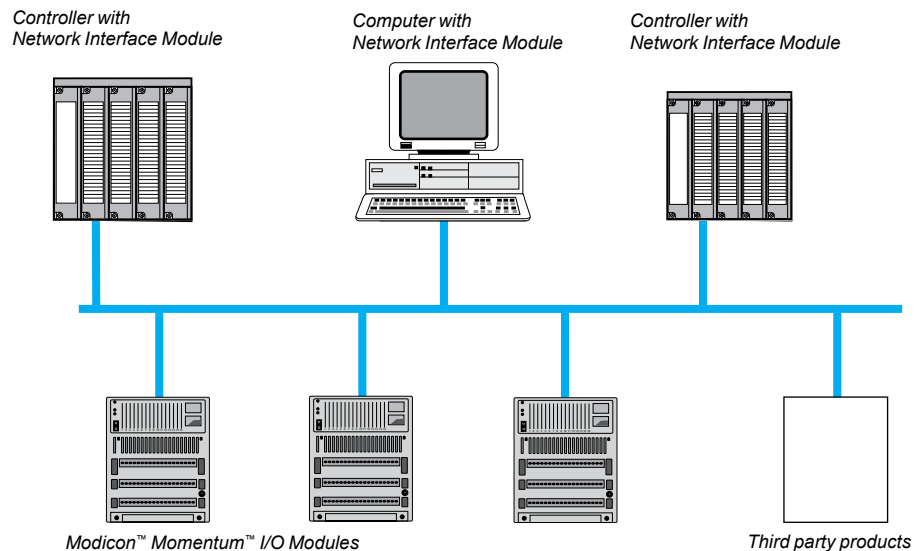

Introduction

The Model 170 DNT 110 00 Profibus DP™ communication adapter for the Modicon™ Momentum™ I/O product line provides a direct connection to the Profibus DP Communication Network for the full family of Modicon Momentum I/O modules. This connectivity enables the Modicon Momentum I/O to be used in open architecture control systems with other Profibus DP compatible control products, including: programmable controllers, industrial computers, operator control stations, drive systems, and other controls – to provide a flexible, cost-effective solution for distributing I/O modules throughout a large area.

The Profibus DP communication adapter is a single package that is designed to plug on to any of the Modicon Momentum Input/Output modules base, thus allowing the I/O module full access to the Profibus DP Communication Network. Each Modicon Momentum I/O module is an individual node on the network, with its address user-selected on the dual rotary switch on the front of the communication adapter. The figure below illustrates a typical control system using Modicon Momentum I/O modules on the Profibus DP network with programmable controllers and industrial computer systems.

The Profibus Configuration File is required for the configuration of the Modicon Momentum I/O Modules on the Profibus DP network. This file contains the Profibus PNO "Identnumber" for Modicon Momentum I/O modules, and is available at no charge to users as a download over the Internet from the Schneider Electric web page.

Network Topology

Description

The front panel of the **170 DNT 110 00** Profibus DP Communication adapter is comprised of:

- 1 LED Status Indicators comprising: BF (green), detected bus fault
- 2 A 9-Pin SUB-D connector for connection to the Profibus DP Network
- 3 Area for Label (label shipped with I/O base)
- 4 Rotary switches for slave addresses

Specifications		
Model No.	170 DNT 110 00	
Communication bus		Profibus DP™
Communication rate		9.6 Kbit/s... 12 Mbit/s
Number of nodes (devices)		Up to 126 devices (32 without repeater)
Media		Twisted Pair
Distance	m (ft)	Up to 1 200 (4 000)
Connectors		9 Pin "D" connectors
Error checking		CRC-16 error check
Error and fail states		Fail safe
Addressing		Switch selectable
Mode of operation		Master-Slave
Topology		Multi-Drop, Ring
Packaging		Standard Modicon™ Momentum™ communications adapter enclosure - IP20 environment
Indicator lights		Diagnostic and status light standard
Power source		Power supply on-board the I/O base
Agency approvals		UL, CE, CSA

Modicon™ Momentum™ automation platform

M1/M1E processor adapters

Introduction

Modicon™ Momentum™ M1/M1E processor adapters are based on the Modicon 984 family of products. You can mount these adapters on Modicon Momentum I/O Bases to provide intelligence to the I/O. The processor adapter can quickly and independently solve logic, control its own local I/O (discrete or analog), and communicate to other control entities through one of a number of Modicon Momentum communication options. The processor adapter can turn an ordinary I/O Base into a PID controller or high-speed logic solver.

You can create your own controller from a number of different bases, and with other Modicon Momentum options, network your local logic solvers together into an intelligent subsystem as part of a larger Modicon application, or into a stand alone, integrally networked system with local controllers with extended I/O.

Modicon Momentum M1/M1E processor adapters can stand alone, or be mounted on a single Modicon Momentum I/O Base (with its own extended Modicon Momentum I/O connected to the I/O Bus Port on **171 CCS 760 00** processor adapter). It can also be mounted together with one of a variety of Modicon Momentum Option adapters – providing different network capabilities, a time-of-day clock, and a battery back-up system. The built-in flash memory is used to store the executive, allowing for convenient field upgrades of the operating system. The flash memory can also be used to back up your applications, creating a local copy of your program to be loaded back into RAM, thus providing original program file integrity. On the **171 CCS 780 00** processor adapter, the RS 485 port can be used to connect to dedicated devices such as an operator interface panel or a marquee, or used in a master/slave RS 485 network to connect to multiple devices.

The processor adapters can be programmed with Modsoft™ version 2.5 or greater, Concept™ version 2.1 or greater, ProWORX™ NxT version 2.0 or greater or ProWORX 32.

The following table describes the specifications of the Modicon Momentum M1/M1E processor adapters.

Specifications

Programming Software for Modicon Momentum

Modicon Momentum processor adapters have a number of PC programming software options available. You can program your processor adapter via the Modbus RS 232 serial port, or with an M1E processor via Ethernet network. If using a Modbus Plus Option adapter in conjunction with a Processor adapter, you can program via an SA85 card installed in a PC and connected to the same Modbus Plus network.

For more specific information, see the appropriate Modicon Momentum, ProWORX or Concept programming software literature and documentation.

Modicon™ Momentum™ automation platform M1/M1E processor adapters

Description

A typical Modicon™ Momentum™ M1/M1E Processor adapter consists of the following components:

- 1 Modbus™ or Ethernet Port connector
- 2 Optional second port (Modbus or I/O bus)
- 3 LED indicators
- 4 Fill-in Label

Mounting

A typical system, showing a model **171 CCS 760 00** Modicon Momentum M1 processor adapter mounted on top of a Modicon Momentum I/O Base. The processor adapter controls the I/O it is mounted on, the local I/O, and can control externally configured I/O. You can also use a Modbus Plus™ Option adapter with the processor adapter to extend the system's I/O capacity.

Modicon™ Momentum™ automation platform

Option adapters

Introduction

Modicon™ Momentum™ option adapters, mounted on Modicon Momentum I/O bases, can be used to enhance the capabilities of the Modicon Momentum processor adapters that mount on top of the option adapter. These option adapters allow you to network your local logic solvers together into an intelligent subsystem as part of a larger Schneider Electric application, or into a stand alone, integrally networked system with local controllers with extended I/O.

Modicon Momentum option adapter models include:

172 PNN 210 22 - one Modbus Plus™ communication port

172 PNN 260 22 - two redundant Modbus Plus communication ports

172 JNN 210 32 - one general-purpose serial communication port, RS 232 or RS 485 selectable

Each of these option adapters provides an on-board, TOD (*Time-Of-Day*) clock that is available to the application residing in the processor adapter. The clock is useful for the scheduling of events, time-stamping operations and operator interface requirements. In addition, each option adapter contains a battery-backup system that maintains the application and its variables in the event of a power outage to the processor adapter. The option adapter's convenient side-door access allows for quick replacement of the single 2/3 AA Lithium battery.

In addition to the TOD clock and battery backup features, the **172 PNN 210 22** adapter allows you to add networking to the intelligent I/O base. Model **172 PNN 260 22** allows you to add redundantly-cabled networking to the I/O base. This opens the Modicon Momentum product line to a broad spectrum of applications. You can use the port to connect to other processors, such as:

- Other Modicon Momentum processor/option adapters
- Other PLCs enabled with Modbus Plus
- Modicon Momentum Modbus Plus communication adapters and I/O bases
- Other third party devices using Modbus Plus to communicate

Model **172 JNN 210 32** allows you to add a second, defacto-industry standard Modbus port (selectable RS 232/485) to the I/O base. You can use the port to connect to other processors, such as other Modicon Momentum processor/option adapters, and to other devices, such as operator interface panels and display marquees.

Programming software for Modicon Momentum

Modicon Momentum processor adapters have a number of PC programming software options available. You can program your processor adapter via the Modbus RS 232 serial port, or if using a Modbus Plus option adapter in conjunction with a processor adapter, via an SA85 card installed in a PC and connected to the same Modbus Plus network. For more specific information, see the appropriate Modicon™ Momentum, ProWORX™, and Concept™ programming software documentation.

Description

A typical Modicon™ Momentum™ option adapter consists of the following components :

- 1 9-pin D-shell connector(s) for Modbus Plus™ communications
- 2 Battery compartment
- 3 LED indicators
- 4 Address switches for Modbus Plus

Mounting

Modicon Momentum option adapters provide the processor adapters with additional networking capabilities, a time-of-day clock, and a battery back-up. The option adapters also snap onto the I/O base; in this figure, the processor adapter stacks on top. Here, the option adapter is used in conjunction with the processor adapter to extend the system's I/O capacity.

Introduction

Schneider Electric offers copper and fiber optic Ethernet cables for wiring your IP 20 and IP 67 devices.

Examples

Combined IP 20 and IP 67 wiring (copper)

For key:

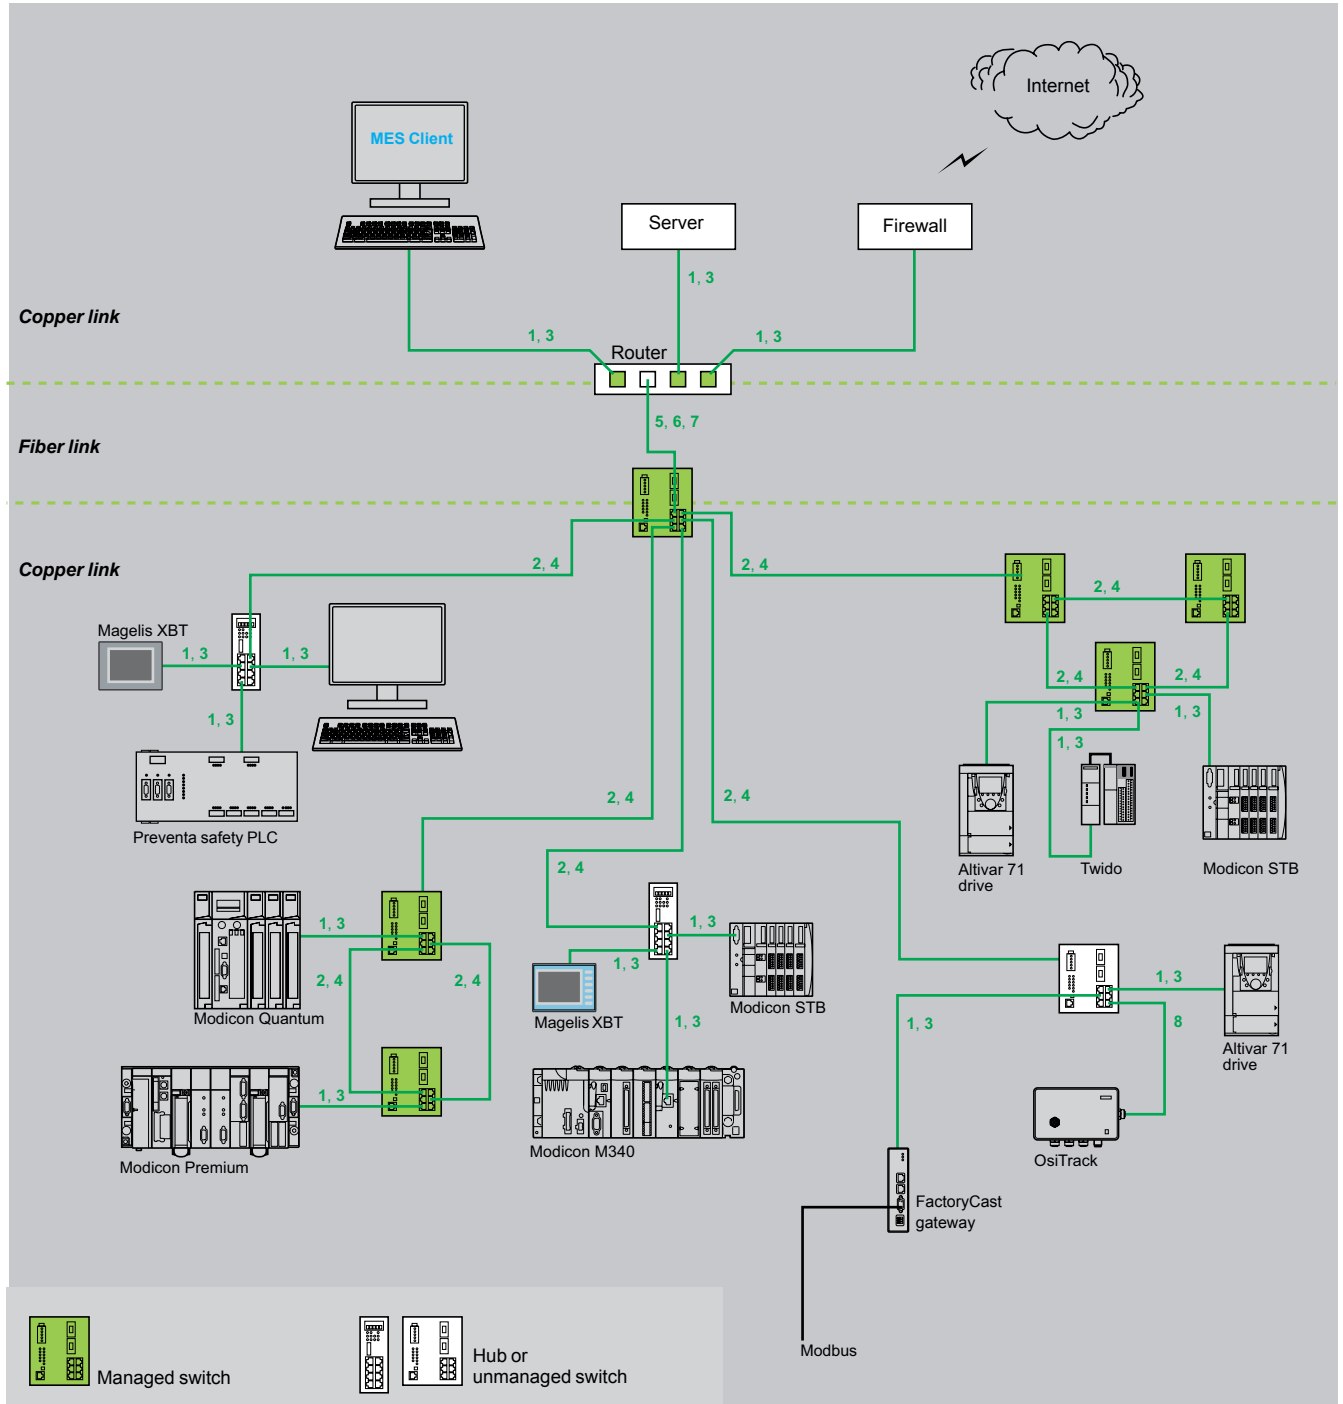

1, 3: Straight copper cordsets

2, 4: Crossed copper cordsets

8: Cables with IP 67 connector
see pages 78 and 79.

Examples (continued)

Combined Copper and Fiber wiring

For key:

1, 3: Straight cables

2, 4: Crossed cord cables

5, 6, 7: Fiber optic cables

8: Cables with IP 67 connector
see pages 78 and 79.

Shielded copper connection cables

ConneXium™ shielded connection cables are available in two versions to meet current standards and approvals:

■ EIA/TIA 568 shielded twisted pair cables for e market

These cables conform to:

- EIA/TIA-568 standard, category CAT 5E
- IEC 11801/EN 50173 standard, class D

Their fire resistance conforms to:

- NF C32-070# C2 classification
- IEC 322/1 standards
- Low Smoke Zero Halogen (LSZH)

■ EIA/TIA 568 shielded twisted pair cables for UL market

The cable material is:

- CEC type FT-
- NEC type CM

“Do it Yourself” cable and connectors

The “Do It Yourself” offer is comprised of 2 references for “field installable” connectors (M12 and RJ45) and one reference for spooled cable measuring 300 m. The product are intended for use in industrial Ethernet networks supporting transmission rates up to 100 Mbit/s over the combined maximum cable length up to 80 m.

Quick, on-the-floor assembly is accomplished with only a knife and pliers.

Description	According to	Length m (ft)	Reference	Weight kg

Introduction

Hubs (*concentrators*) are used for transmitting signals between several media ports. Hubs are “plug and play” devices that do not need any configuration. The use of hubs makes it possible to create the following topologies:

- Star topology using hubs
- Tree topology using hubs

Star topology

Tree topology

Introduction

The use of ConneXium™ transceivers makes it possible to perform the following:

- Creation of linear fiber optic bus topologies, for products with twisted pair cable Ethernet connection
- Interfacing products with twisted pair cable Ethernet connection with a fiber optic cable

Transceivers are “plug and play” devices that do not need any configuration.

ConneXium transceivers provide fiber optic wiring for transmission in areas subject to interference (high levels of electromagnetic interference) and for long distance communications.

Linear topology on optical fiber

Ethernet network

Cabling system

ConneXium™ unmanaged switches

Introduction

Switches are used to increase the limits of architectures – based on hubs or transceivers – by separating collision domains. Higher layer communication is provided between the ports, and collisions at link layer are not propagated (filtering). Switches improve performance by better allocation of the pass band due to the reduction of collisions and the network load. Certain Connexium™ switch models also enable redundant architectures to be created on twisted pair copper ring or fiber optic.

Switches are “plug & play” devices that do not need any configuration. They can also be managed remotely via the SNMP or HTTP protocols for monitoring and diagnostics purposes.

Modicon™ Momentum™ automation platform

Concept™ programming software

Introduction

Concept™ software is a configuration and application programming tool for the Modicon™ Quantum™ and Modicon™ Momentum™ automation platforms. It is Windows™-based software that can be run on a standard PC. The configuration task can be carried out online (with the PC connected to the Quantum processor) or offline (PC only). Concept supports the configuration by recommending only permissible combinations. During online operation, the configured hardware is checked immediately for validity, and illegal statements are rejected.

Concept editors support five IEC programming languages:

- Function Block Diagram (FBD) language
- Ladder (LD)
- Sequential Function Chart (SFC) and Grafset language
- Instruction List (IL)
- Structured Text (ST)

Also supported is ladder logic (LL984) that is compatible with Modsoft™. IEC 61131-3 compliant data types are also available. With the data type editor, custom data types can be converted to and from the IEC data types.

The basic elements of the FBD programming language are functions and function blocks that can be combined to create a logical unit. The same basic elements are used in the LD programming language; LD provides contact and coil elements. The Grafset SFC programming language (SFC) uses basic step, transition, connection, branch, join and jump elements. The IL and ST text programming languages use instructions, expressions, and key words. The LL984 programming language uses an instruction set and contact and coil elements.

Programs can be written in logical segments. A segment can be a functional unit, such as conveyor belt control. Only one programming language is used within a given segment. You build the control program, which the automation device uses to control the process, by combining segments within one program. Within the program, IEC segments (written in FBD, LD, SFC, IL and ST) can be merged. The LL984 segments are always processed as a block by the IEC segments. Concept's sophisticated user interface uses windows and menus for easy navigation. Commands can be selected and executed quickly and easily using a mouse. Context-sensitive help is available at each editing step.

PLC configuration

Variables for linking basic objects within one section are not required by the graphic programming languages (FBD, LD, SFC and LL984).

These wiring diagrams are managed by the system, which minimizes any configuration effort. Other variables, such as variables for data transfers between different sections, are configured with the variables editor. With the data type editor, custom data types can be derived from existing data types.

Functions

Concept™ software provides an editor for each programming language. These editors contain custom menus and tool bars. You can select the editor to be used as you create each program segment.

In addition to the language editors, Concept provides a data type editor, a variables editor and a reference data editor.

Function Block Diagram (FBD) language

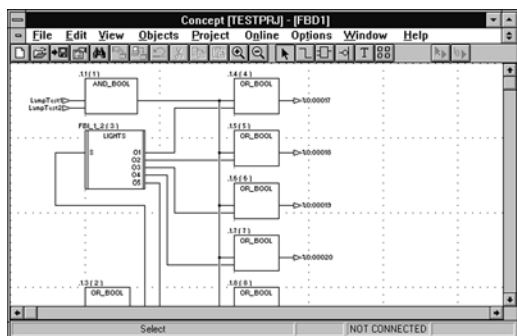

With the IEC 61131-3 function block diagram language, you can combine elementary functions, elementary function blocks (EFBs) and derived function blocks (known as FFBs) with variables in an FBD.

FFBs and variables can be commented. Text can be freely placed within the graphic. Many FFBs offer an option for input extensions.

Concept provides various block libraries with predefined EFBs for programming an FBD. EFBs are grouped in the libraries according to application types to facilitate the search.

In the FBD editor, you can display, modify and load initial values, and current values can be displayed. The CONT_CTL control library allows you to display animated diagrams of the FFBs and a graph of the current values.

For custom function blocks (DFBs), the Concept-DFB editor is used. In this editor, you can create your own function blocks from EFBs or existing DFBs. DFBs created in the FBD editor can be recalled in the LD, IL and ST editors, and DFBs created in the LD, IL and ST editors can be used in the FBD editor.

Ladder (LD)

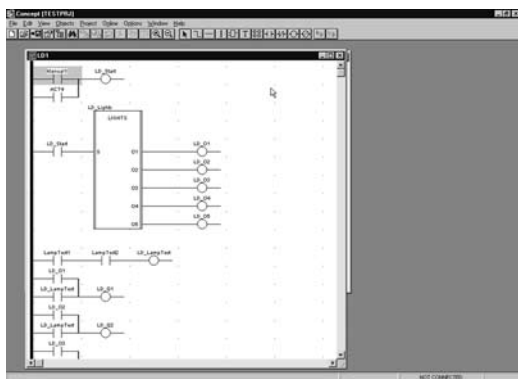

With the IEC 61131-3 ladder diagram language, you can build an LD program with elementary functions, function blocks and derived function blocks (known as FFBs), along with contacts, coils and variables. FFBs, contacts, coils and variables can be commented. Text can be freely placed within the graphic. Many FFBs offer an option for input extensions.

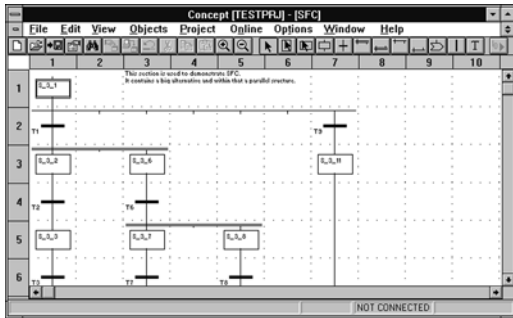

The structure of an LD segment corresponds to that of a current path for relay circuits. On its left side is a left bus bar, which corresponds to the phase (L conductor) of a current path. As with a current path, only the LD objects (contacts, coils) connected to a power supply (i.e., connected to the left bus bar) are processed in LD programming. The right bus bar, which corresponds to the neutral conductor, is not visible. However, coils and FFB outputs are internally connected to it to create a current flow.

The same EFB block libraries available for the FBD editor can be used in the LD editor to program a ladder diagram.

In the FBD editor, you can display, modify and load initial values; current values can be displayed. The CONT_CTL control library, for example allows you to display animated diagrams of the FFBs, along with a graph of the current values.

For custom function blocks (DFBs), the Concept-DFB editor is used. In this editor, you can create your own function blocks from EFBs or existing DFBs. DFBs created in the LD editor can be recalled in the FBD, IL and ST editors, and DFBs created in the FBD, IL and ST editors can be used in the LD editor.

Functions

Sequential Function Chart (SFC) language

With the IEC 61131-3 sequential function chart (SFC) language, you can define a series of SFC objects that comprise a control sequence. Steps, transitions and jumps in the sequence can be commented. Text can be freely placed within the graphics. You can assign any number of actions to every step. A series of monitoring functions – e.g., maximum and minimum monitoring time – can be integrated into each step's specifications. The actions can be assigned an attribute symbol (as required by IEC) to control the action's performance after it has been activated – e.g., a variable can be set to remain active after exiting.

Instruction List (IL)

With the IEC 61131-3 IL language, you can call entire functions and function blocks conditionally or unconditionally, execute assignments and make conditional and unconditional jumps within a program segment.

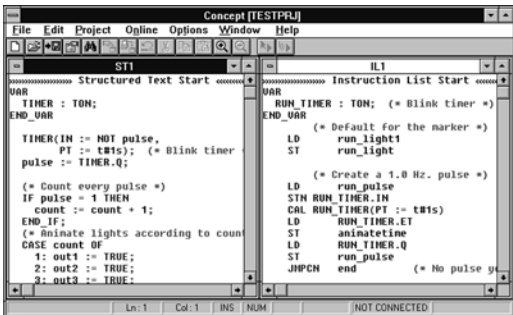

IL is a text-based language, and standard Windows™ word processing tools can be used to generate code. The IL editor also provides several word processing commands. Keywords, separators and comments are spell-checked automatically as they are entered. Detected errors are highlighted in color.

For custom function blocks (DFBs), the Concept™-DFB editor is used. In this editor, you can create your own function blocks from EFBs or existing DFBs. DFBs created in the IL editor can be recalled in the ST, LD, and FBD, DFBs created in the ST, LD, and FBD editors can be recalled in the IL editor.

Structured Text (ST)

With the IEC 61131-3 ST language, you can call function blocks, execute functions and assignments and conditionally execute and repeat instructions. The ST programming environment is similar to Pascal. IL is a text-based language, and therefore standard Windows word processing tools can be used to generate code. The ST editor also provides several word processing commands. Keywords, separators and comments are spell-checked automatically as they are entered. Detected errors are highlighted in color.

Custom function blocks (DFBs) created with the ST editor can be called in the IL, LD and FBD editors; DFBs created in the IL, LD and FBD editors can be used in the ST editor.

Functions

Data type editor

The data type editor defines new derived data types. Any elementary data types and derived data types already existing in a project can be used for defining new data types. With derived data types, various block parameters can be transferred as one set. Within the program, this set is divided again into single parameters, processed, then output as either a parameter set or individual parameters. Derived data types are defined in text format, and standard Windows™ word processing tools can be used. The data type editor also provides several word processing commands.

Variables editor

The variables editor contains input options for:

- Variable type (located variable, unlocated variable, constant)
- Symbolic name
- Data type
- Direct address (explicit, if desired)
- Comments
- Identification as human-machine interface (HMI) variable for data exchange

Animation tables editor

In online mode, the reference data editor displays, forces and controls variables. The editor contains the following options:

- Default values for the variable
- Status display for the variable
- Various format definitions
- Ability to isolate the variable from the process

Functions

Libraries

IEC library

The IEC library contains the EFBs defined in IEC 61131-3 (calculations, counters, timers, etc).

Extended library

The extended library contains useful supplements to various libraries. It provides EFBs for mean value creation, maximum value selection, negation, triggering, converting, building a traverse with interpolation of the first order, edge detection and determination of the neutral range for process variables.

System library

The system library contains EFBs in support of system functions. It provides EFBs for cycle time detection, utilization of various system clocks, control of SFC sections and system status display.

CLC and CLC_PRO library

The Continuous Control library can be used to set up process-specific control loops. In particular, it offers controller, derivative and integral control functions. The CLC_PRO library contains the same EFBs as the CLC library along with data structures.

Communication library

The communication libraries of built-in function blocks provide easy integration of programs that allow communication between PLCs or HMI devices from within the PLC's application program. Like other function blocks, these EFBs can be used in any language to share data, or provide data to the HMI device for display to the operator.

Diagnostics library

The diagnostics library is used for troubleshooting the control program. It contains EFBs for action, reaction, interlocking, and process prerequisite diagnostics, along with signal monitoring.

LIB984 library

The LIB984 library provides common function blocks used in both the 984 ladder logic editor and the IEC languages. This allows for easy transition of portions of application code from the LL984 environment to the IEC environment.

Fuzzy logic library

The fuzzy library contains EFBs for fuzzy logic.

Analog I/O library

The ANA_IO library is used to process analog values.

Modicon™ Momentum™ automation platform

ProWORX™ 32 programming software

Introduction

ProWORX™ 32 LL984 programming software is a full-featured, Modicon™ Quantum™ and Modicon™ Momentum™ M1/M1E PLC programming software that is compatible with Windows platforms (98/NT/2000/XP). ProWORX 32 gives you the power to program your Modicon controllers online or offline, manage your I/O subsystems, and analyze your plant's activity in real time.

ProWORX 32 offers client-server functions for organizing groups and user rights, centralizing project backup, and serving as a bridge between design department and workshop. The project emulator makes it possible to test projects before executing them in a PLC operating environment, to help ensure optimal system effectiveness at all times.

Some of the new ProWORX 32 features include:

- **32-bit processing.** With 32-bit processing, ProWORX 32 is an even more powerful solution than its predecessors, ProWORX Plus and ProWORX NxT. 32-bit processing lets you utilize the power of state-of-the-art operating systems for optimal development and operational performance.
- **A comprehensive suite of tools.** ProWORX 32 provides everything you will need to start, configure, test and complete your project, quickly, reliably and professionally. And with its improved suite of standard utilities, ProWORX 32 is a virtual "one stop shop" for your Automation requirements. No more searching on the web for special features or functions, they're included to save you time and increase your productivity.
- **A high-performance offer.** In addition, ProWORX 32 will simplify and speed up your system development and commissioning time with powerful diagnostics, easier integration, and greater openness and flexibility.
- **Easier integration.** Using standard Microsoft components, ProWORX 32 opens up a wealth of user data. Import and export capabilities have been enhanced to provide a variety of integration options for HMI and third party devices, such as a built in "Alliance Tool" that allows users to create hardware profiles for newly developed devices. The profiles can even be sent electronically to Schneider Electric for inclusion in future ProWORX 32 releases.

Windows™ environment

The familiar Windows-based programming environment means you spend less time learning how to do things, and more time being productive. ProWORX uses familiar Windows features like user-defined screens, drag-and-drop, cut and paste, search, and global replace.

Conversion

484™ PLC code to 984™ PLC code in one step! The most flexible conversion tools available in the automation industry. That is the reputation ProWORX products have always enjoyed, and ProWORX 32 is no exception. With the ability to convert from older project databases to this latest tool, ProWORX 32 supports almost 30 years of PLC heritage.

Multiple projects

Imagine the time and effort you could save by testing a new project with an existing project while it is running live. Now you can with the Multiple Projects function of ProWORX 32, even with two PLCs running simultaneously! Perform diagnostic checks to validate interdependencies between your emulated project and your live applications, in real time, so you can go live with total confidence.

Intuitive register editor

A powerful analysis tool, the Data Watch Window shows you information from your plant in real time, or logs it to disk for in-depth historical analysis later on. Easily get the data you need to make informed, effective production decisions. View and edit data in full page display, see trends and track data points against time in a spreadsheet, and monitor any combinations of discrete and analog data.

Modicon™ Momentum™ automation platform

ProWORX™ 32 programming software

Introduction

I/O drawing generator

Save hours of painstaking effort with ProWORX™ 32's I/O Drawing Generator, that automatically creates wiring diagrams for the I/O cards defined in the Traffic Cop. Generate necessary drawings all at once, or just one card at a time. Simply select an address the I/O card uses with the Network Editor, then click the drawing button on the Hardware Back Referencing panel to display the diagram. If desired, save it as an AUTOCAD-compatible .DXF file or print it.

Network editor

With the Network Editor, ProWORX 32 reduces development time by using the same commands and instructions for every controller. Simply cut, copy, and paste networks from one platform to any other.

Program documentation

ProWORX is first-class software with high-quality program documentation. Use one of the many standard templates to get started, and progress to assemble your own custom documentation. For better references and easier-to-use documentation, we have provided annotation down to the "Bit" level to allow longer comments and more lines of text. Even simple things like using Windows O/S fonts to help eliminate printer issues demonstrates that every detail has been considered.

Realtime network status

Find the controller you need quickly and simplify network diagnostics with ProWORX 32's powerful Network Scan feature. Network Scan searches your Modbus or Modbus Plus networks, then identifies and graphically displays each device found – and shows its status.

Advanced I/O management

Ensure that the I/O card you are configuring in the software matches the one on your plant floor with ProWORX 32's graphical Traffic Cop. It displays I/O cards on your screen the same way they look in real life, which helps eliminate confusion. To place a card, just select it from the convenient drop down menu and then drag it into the controller slot you want. To save even more time, the Traffic Cop automatically associates the card's I/O points with a block of free addresses in your controller. Once configured, manage your I/O with Pro WORX 32's complete documentation tools, with references for each head, drop, rack, slot and address. And, the Traffic Cop's graphical display shows you at-a-glance that your I/O is healthy.

Introduction

Client/Server Tools

ProWORX™ 32 allows projects to be developed in a collaborative environment without sacrificing control and security – by utilizing the ProWORX 32 server as the central repository for projects, the center for security, and the hub for communications. The system administrator has total control over user accounts, user groups, passwords, rights, and auditing policies and can grant access when and where needed.

The client/server relationship allows projects to be skillfully managed and controlled. The server can be used to keep “Master” versions of PLC projects for editing (subject to rights), while editing is achieved using the client. This can be done via a stand alone PC or even on the server, since both client and server can reside on the same PC.

The server has the capability to schedule software backups of the controller, detect software modifications, and store multiple versions. Even more powerful is the ability to communicate from the client to the server using either Ethernet TCP/IP or Modbus Plus™.

Project Emulator

The project emulator is a very powerful tool that will help save considerable time in the design and testing of your system. It provides the ability to test projects prior to running them in the PLC run-time environment to help ensure your system will run at peak efficiency immediately upon commissioning. Two emulators are provided that test interdependent projects. They are used to test communications, including: I/O polling and monitoring network activities between projects.

Material List Generation

Want a shopping list for your PLC equipment? The Material List Generation function automatically creates a list for the project, either online or offline, even taking into account the contents of the Traffic Cop. Add prices and comments once the list is generated, saving you time and insuring that required components are fully documented and identified.

Modicon™ Momentum™ automation platform

Aggressive environments protection
Optional conformal coating

Introduction

If your control system needs to operate in a corrosive environment, selected Modicon™ Momentum™ modules can be ordered with a conformal coating applied to components of the product. Conformal coating will extend the component's life and enhance its environmental performance capabilities.

Mixed flowing gas (power on)

Standard	Pollutant	Parts/billion	Modicon Momentum's performance
EIA 364-65 level III	Cl ₂	20 (±5)	Meets the standard
	NO ₂	200 (±50)	Exceeds standard (1250 parts/billion)
	H ₂ S	100 (±20)	Meets standard
ISA-S71.04 GX severe	Cl ₂	10	Exceeds standard (20 parts/billion)
	NO ₂	1250	Meets standard
	H ₂ S	50	Exceeds standard (100 parts/billion)
	SO ₂	300	Meets standard

Humidity (operating)

Standard	Concentration (%)	Modicon Momentum's performance
IEC-68-2-3	93 @ 60 °C (140 °F)	Meets standard

Salt mist (non-operating)

Standard	Concentration (%)	Modicon Momentum's performance
IEC 68-2-11	5 (±1)	Exceeds standard (5.7%)

Fungus resistance

Standard	Modicon Momentum's performance
MIL-I-46058C	Designed to meet standard

Temperature cycling (operating)

Standard	Cycles	Modicon Momentum's performance
IEC 68-2-14	100 @ 0...60 °C (32...140 °F)	Meets standard

Dust (non-operating)

Standard	Pollutant	Weight (%)	Modicon Momentum's performance
EIA 364-TP91 (pending)	Silica	36	Meets standard
	Calcite	29	Meets standard
	Iron oxide	12	Meets standard
	Alumina	8	Meets standard
	Gypsum	5	Meets standard
	Paper fiber	3	Meets standard
	Cotton fiber	3	Meets standard
	Polyester fiber	2	Meets standard
	Carbon black	1	Meets standard
	Human hair	0.5	Meets standard
	Cigarette ash	0.5	Meets standard

Modicon™ Momentum™ automation platform

Aggressive environments protection
Optional conformal coating

References

The following is a list of Modicon™ Momentum™ products that are available with optional conformal coating.

Note: Please note that a "C" is appended to the standard reference for those Modicon Momentum products.

- 5 Added standoff

Modicon™ Momentum™ communication adapter ground screw

Due to new INTERBUS™ standards for electrical noise immunity, a number of Modicon™ Momentum™ products have been updated to include the enhanced grounding system, that is required to meet the revised electrical noise immunity standard (ability to pass a 2.2 kVDC electrical fast transient burst test).

This grounding system includes a ground screw located in the communication or M1/M1E processor adapter, that is connected to a fixed standoff-ground nut on the printed circuit board, and to a standoff on selected Modicon Momentum I/O bases.

Note: This electrical noise immunity requirement applies only to systems that requires InterBus certification, version 2, and not to any other communication network that Modicon Momentum I/O currently uses. The standard electrical fast transient test for Modicon Momentum is 500 Vdc.

The following is a list of the Modicon Momentum modules that currently have been updated to include the new grounding system:

- Communication adapters
- M1/M1E processor adapters and option adapters
- Discrete and analog I/O bases

In some countries, certification of certain electrical components is enforced by law. A standard conformity certificate is then issued by the official organization. Each certified product must carry approval symbols when enforced. Use on board merchant navy vessels generally requires prior approval (= certification) of an electrical device by certain marine classification authorities.

Key	Certification body	Country
CSA	Canadian Standards Association	Canada
C-Tick	Australian Communication Authority	Australia
GOST	Gost Standard Scientific Research Institute	C.I.S., Russia
UL	Underwriters Laboratories	USA
Key	Classification authority	Country
IACS	International Association of Classification Societies	International
ABS	American Bureau of Shipping	USA
BV	Bureau Veritas	France
DNV	Det Norske Veritas	Norway
GL	Germanischer Lloyd	Germany
LR	Lloyd's Register	United Kingdom
RINA	Registro Italiano Navale	Italy
RMRS	Russian Maritime Register of Shipping	C.I.S.

The table below shows the situation as of 01/03/2008 for certifications obtained or pending from organizations for base PLCs. An overview of certificates for Schneider Electric products is available on our web site: www.schneider-electric.us

Community regulations

European directives

The opening of European markets implies a harmonization of regulations in the various European Union member states.

European Directives are documents used to remove obstacles to the free movement of goods and their application is compulsory in the European Union.

Member states are obliged to transcribe each Directive into their national legislation and, at the same time, to withdraw any conflicting regulations.

The Directives, particularly those of a technical nature, only set objectives, called "general requirements".

The manufacturer must take necessary measures to help ensure that his products conform to the requirements of each Directive relating to his equipment.

As a general rule, the manufacturer affirms that his product conforms to the necessary requirements of the Directive(s) by applying the CE label to his product. The CE marking is applied to Schneider-electric products where relevant.

The significance of CE marking

■ The CE marking on a product means that the manufacturer certifies that this product conforms to the relevant European Directives. It is necessary so that a product subject to a Directive(s) can be marketed and freely moved within the European Union.

■ The CE marking is intended solely for the national authorities responsible for market regulation.

For electrical equipment, conformity of the product to standards indicates that it is suitable for use.

One or more Directives, as appropriate, may apply to our products, in particular:

■ The Low Voltage Directive 2006/95/EC

■ The Electromagnetic Compatibility Directive 89/336/EEC, amended by Directives 2004/108/EC

■ Directive CE ATEX 94/9/EC
